### Reference Mark Check List

Please Mark the Sample at all Locations  
 We cannot process without these reference marks

- CL - Centerline - Defines Center of Mobility Base to give proper orientation of Client in Mobility Base
- SB - Seat to Back Reference Line  
Determines correct seat depth and back height
- BH - Back Height
- RD - Right Side Seat Depth
- LD - Left Side Seat Depth
- BA - Outside Back to Seat Angle - Reference measurement only  
Measured on outside of cast
- LL - Lateral Lines - Must be on both sides. Mark each side same distance from base. Reference line for proper leveling and tilt of system.

Flared Seat and Back - If Total System Width is wider than mobility base, please check for interference with armrest or wheels before ordering this modification

- ### Full System Cut Style
- Taper
  - Bucket

 = and are limited to + 1 1/2" Seat Depth and + 2" on Back Ht.  
 Please mark belt notch locations on sample. Backs with Swingaway Laterals may require that notch be moved rearward for proper clearance of Swingaway Lateral.

## Determine Wheelchair Frame Width

### User Contact Width

## Recommendations

- Mark Sample for all Reference Lines  
Be sure to use Centerline as reference point
- Determine Wheelchair Frame Width from adjacent chart. Please keep in mind that these measurements do NOT include any future growth. Chairs in the narrower range will require reinforced laterals.

Note: Please try to add any needed modifications at time of original quote or order.
